

RESIBLOCK

Sealing, Stabilising, Protecting Paving

CASE STUDY

Project Name: Owlcoates Shopping Centre
Client: Asda
Contractor: Houseman & Falshaw
Site: Asda, Pudsey, West Yorks
Project: Car Park Refurbishment
Materials Used: Resiblock '22'
Date: August 2004

Problem:

This busy supermarket car park receives heavy traffic on a daily basis. Over time, this continuous use of vehicles had contributed to the cause of sand erosion resulting in rutting and paver de-stabilisation.

Solution:

Resiblock Limited advised that installing Resiblock '22' would eliminate these problems, by permanently locking in the jointing sand and preventing its erosion whilst maintaining its flexural qualities.

Resiblock worked with contractors Houseman & Falshaw who lifted and re-laid the paving in August 2004, installing Resiblock '22' with the minimum of fuss. The material is applied to the surface and joints of the blocks with a watering can and the surplus removed with a squeegee.

Benefits:

Resiblock '22' is a specialist prepolymer urethane (SPPU) which prevents the erosion of jointing sand. As the project was the main car park for the supermarket, the areas sealed were completed in controlled cordoned-off sections, whilst remaining open to the public.
