

# CASE STUDY

**Project:** Wood Wharf – Phase One  
**Client:** Canary Wharf Group PLC  
**Contractor:** In-Ex Landscapes  
**Paver Type:** Silver Grey Granite Slabs  
600mm x 600mm  
**Area:** 4,000m<sup>2</sup>  
**Site:** Wood Wharf, Canary Wharf,  
London  
**Product:** Resiblock Resifix Commercial  
**Date:** August 2019

## The Site

As Canary Wharf's newest district, Wood Wharf has been designed to provide a new residential led, mixed use, waterside community defined by the quality of its public spaces and its exemplary architecture. The development will broaden and extend the Canary Wharf Estate, adding to its vibrancy and continually expanding its cultural, community and commercial aspects.

## The Challenge

With such a large mixed-use area being created within the heart of Canary Wharf, the client was keen to ensure that the paving would be able to stand up to a variety of challenges. This included prevention of paver destabilisation through heavy footfall traffic, vehicular use and the prevention of sand loss through mechanical cleaning regimes.

## The Solution

The success at Main Street, Gibraltar allowed Resiblock to demonstrate the effectiveness of Resiblock Resifix Commercial in a mixed-use environment. With Main Street acting as the central hub of the British Overseas Territory, Resiblock were able to show the client how Resifix Commercial would withstand the effects against both high volumes of footfall, vehicular trafficking and cleaning regimes. Moreover, Resiblock were able to demonstrate the effect of Resifix Commercial on the pavers themselves, as similar Granite Slabs were used at The National FA Academy, where Resiblock had been successfully installed seven (7) years previously.

## Benefits at a Glance:

- One pack material
- Inhibits the growth of weeds and grass in joints
- Sweeps in like jointing sand
- Simply activate with the addition of water
- 10 times faster to install than traditional pointing methods
- No effect on the colour of the paving
- Environmentally friendly
