

Sealing, Stabilising, Protecting Paving

CASE STUDY

Project: Edenbrook Village
Client: Berkeley Homes
Contractor: O'Halloran & O'Brien
Paver Type: Marshalls Keyblock
200mmx100mm
Area: 1,500m²
Site: Edenbrook Village
Fleet, Hants
Product: Resiblock '22'
Date: November 2021

The Site

With a variety of 2,3,4 and 5 Bedroom Houses, Edenbrook Village is the latest Housing Development created by Berkeley. Located just two miles from the sought-after town of Fleet, the community benefits from an 82-acre country park, a brand-new leisure centre, sports pitches, BMX track and other recreational facilities.

The Challenge

With Marshall Keyblock Concrete Block Paving being used on driveways of all 600 homes at Edenbrook Village, concerns were raised by Berkeley around the long-term protection of the pavers from the accompanying vehicular traffic. As such investigations were made as to how the site could maintain long-term asset protection.

The Solution

Berkley Homes did not have to look far for a solution to their concerns as Resiblock, and the 'Legendary' Resiblock '22' product had been successful installed just an hour away at the Pennyfarthing Homes site of Alexandra Meadows in Lymington. Resiblock '22' traces its use on Housing Developments back to 2004 where it was used at the Rialto Homes site in Barking. Resiblock '22' effectiveness in preventing paving failure by stabilising jointing sand from the effects of vehicular and footfall traffic, has led the product to being used on Concrete Block Paving at sites around the world.

Benefits at a Glance:

- One pack material
- Easy application
- Prevents sand erosion from paver joint
- Prevents the ingress of water and fuel infiltration to the sand laying course
- Maintains structural stability under heavy duty trafficking
- Elastomeric bond works in tandem with paver system
