

Project Name:	FA Academy Burton on Trent
Client:	The F.A.
Contractor:	Murraywood Construction Ltd./ G-Force
Resiblock Product:	Resiblock Resifix Commercial
Project:	8,000m ² Chinese Granite
Date:	July 2012

Challenge:

The F.A.'s 330 acre, £100 million National Football Centre Burton on Trent known as St. Georges Park is the base for all coaching and development work undertaken by the F.A. and is the training and preparation ground for all of the England teams. During construction it was anticipated by the client and main contractor that cleaning regimes would serve to remove the jointing sand leading to de-stabilisation of the paving and tripping accidents. Following site trials Resiblock Resifix Commercial was specified.

Solution:

Resiblock Resifix Commercial was installed by the main contractor Murraywood Construction Ltd. for the stabilisation of the paving against various cleaning regimes, jet washing and vacuum sweeping. Resiblock's team of technicians worked closely with Murraywood Construction and the subcontractor G-Force in connection with the installation of Resiblock Resifix Commercial to the entire 8,000m² of external paving.

Benefits:

Resiblock Resifix Commercial, sweeps in like jointing sand and is activated by the addition of water. Once cured it forms a flexible bond within the joint, preventing erosion of the jointing medium from both natural elements and manmade cleaning regimes.

Benefits at a Glance:

- One pack material
- Inhibits the growth of weeds and grass in joints
- Sweeps in like jointing sand
- Simply activate with the addition of water
- 10 times faster to install than traditional pointing methods
- No effect on the colour of the paving
- Environmentally friendly
